The benefits of an IDEMIA and ICT integration.

The IDEMIA MorphoManager integration enables you to bring together biometric and traditional access control, security, and building automation into a unified platform.
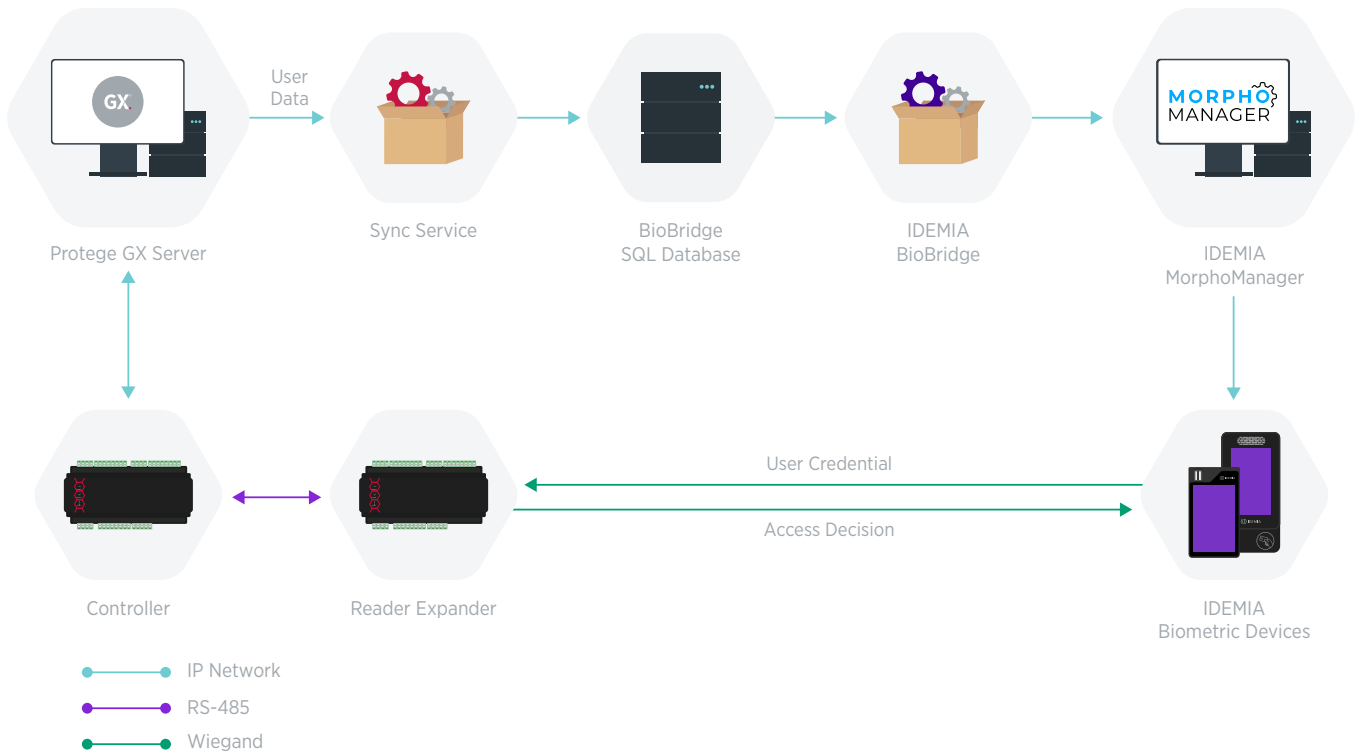

Seamlessly integrate biometrics into Protege GX with a variety of flexible security options to choose from, including facial or fingerprint recognition, handwave access, and multi-factor authentication. When paired with ICT cards, these options can be combined to create a multi-factor authentication access rule requiring both bio + card, greatly enhancing security measures.

Key benefits:

> No more duplicating records – program and manage user records in Protege GX and automatically synchronize them to MorphoManager

> Gain access your way – IDEMIA readers supports ICT cards allowing just biometric or card and biometric access

> Inherently secure – cards can be stolen and PINS copied. Biometrics enable a high security access option for peace of mind

> Reduce plastic waste – no need to replace easily lost or stolen cards. That's a win for your ROI and sustainability

This integration falls under our **Annual Care Plan** – please talk to your Regional Sales representative for more details.
